

Meeting Room Systems

Cut out the commute and meet on-line with our interactive, full HD meeting room solutions. Interact with staff, customers and suppliers with systems that are tailored to your own specific environment and are just as effective as meeting in person.

We install, configure and support equipment that can turn your meeting room into a modern collaborative digital workspace for that premium meeting room experience. Whether you're refurbishing a board room, creating a small huddle room/hub or are simply open to creating a modern hybrid collaboration space, our meeting room systems will address all of your current and foreseeable requirements.

These video conferencing systems have a variety of components depending on the room size, acoustics and lighting. From a simple webcam mounted onto a TV to a full Board Room system incorporating video bar, microphones, ceiling mounted speakers, large commercial displays & projectors etc. Each system can be configured to suit your business needs and budget.

These systems can be fully integrated with Microsoft Teams, Google Meet or Zoom for on-line booking and scheduling of meetings. Additionally, touch-screens mounted on the outside wall or plinth can be used to visually manage meetings.

We will initially meet with you on-site to go through your requirements and to see the available space. If you haven't built your meeting/board room yet or are refurbishing the room(s) then please get in touch as early as possible as we will have suggestions on optimising the space and any wires that will need to be hidden.
